

What do you  
mean by Cash  
Flow?

---

# What do you mean by Cash Flow?

---

- ❖ This is probably a good point in the course to review the differences between earnings and different cash flow metrics

---

# What do you mean by Cash Flow?

---

- ❖ EBITDA represents earnings after all operating expenses but before Depreciation, Amortisation, Interest and Tax
- ❖ EBIT includes the Depreciation and Amortisation
- ❖ Net Income or PAT is profit after Interest and Tax
- ❖ Net Income divided by the (weighted) number of shares in issued equals Earnings Per Share

---

# What do you mean by Cash Flow?

---

- ❖ Note that EBITDA is often used as a proxy for cash flow. In practice the two are seldom the same and when you conduct your own valuations you should check to see what the differences are.
- ❖ Cash flow can be a little more confusing which is why I want to walk through it here...

---

# What do you mean by Cash Flow?

---

- ❖ Cash Flow (CF)
- ❖ Free Cash Flow (FCF)
- ❖ Free Cash Flow to Equity (FCFE)
- ❖ Free Cash Flow to the Firm (FCFF) (unlevered Free Cash Flow)

---

# What do you mean by Cash Flow?

---

- ❖ Cash Flow (CF) or Cash Flow from Operations
- ❖ This is measure of cash flow from normal operations
- ❖ Depreciation and Amortisation are added back to Net Income
- ❖ All other non cash items such as stock based compensation are also added back
- ❖ This also includes changes in net working capital between the two balance sheet dates
- ❖ Operating Cash Flow does NOT include capital expenditure

---

# What do you mean by Cash Flow?

---

- ❖ Free Cash Flow (FCF)
- ❖ Having calculated Cash Flow From Operations, if you then deduct Capital Expenditure you arrive at Free Cash Flow
- ❖ This is the cash flow that Management can now use for discretionary spending from acquisitions to paying dividends

---

# What do you mean by Cash Flow?

---

- ❖ Free Cash Flow to Equity (FCFE) is also called Levered Cash Flow
- ❖ Take Operating Cash Flow, deduct Capex
- ❖ Add net debt issued, deduct net debt repayment, includes interest on debt
- ❖ Represents the cash flow available to Equity investors, taking into account the leverage in the company - hence Levered Cash Flow

---

# What do you mean by Cash Flow?

---

- ❖ Free Cash Flow to the Firm (FCFF) or Unlevered Cash Flow
- ❖ This is the cash flow used in Discounted Cash Flow calculations
- ❖ It requires calculating...

---

# What do you mean by Cash Flow?

---

- ❖ Start with EBIT - Earnings before Interest and Tax
  - ❖ Calculate the hypothetical tax based on EBIT
  - ❖ Add back Depreciation and Amortisation
  - ❖ Deduct any increases in non cash working capital
  - ❖ Deduct Capex
- ❖ EBIT
  - ❖ - Tax
  - ❖ + Depreciation and Amortisation
  - ❖ - Changes in NWC
  - ❖ - Capex
  - ❖ = FCFF

---

# What do you mean by Cash Flow?

---

- ❖ The main lesson from this is that you need to understand the metrics you are working with when preparing your ratios
- ❖ EBITDA is easy but the least accurate
- ❖ FCFF - Unlevered Cash Flow - is the most complicated to calculate but is the most accurate

---

# What do you mean by Cash Flow?

---

- ❖ On balance these ratio metrics provide us with easy to calculate ratios which we can apply to Comparable Company valuations
- ❖ In the end are they really a replacement for a DCF?
- ❖ I am not sure...

What do you  
mean by Cash  
Flow?
