

# Valuation in M&A Transactions

---

# Valuation in M&A Transactions

---

- ❖ M&A transactions normally involve a range of valuation methods
- ❖ These are often presented in the “Football Field” style of presentation

---

# Valuation in M&A Transactions

---

- ❖ The additional dimension is the impact of the “deal” on the valuation
  - ❖ Different perspective of buyer and seller
  - ❖ Strategies, synergies and premiums
  - ❖ Accretion or dilution
  - ❖ Impact of deal on Terminal Value assumptions
  - ❖ Financing - Debt or Equity
  - ❖ Comparable transactions?

---

# Valuation in M&A Transactions

---

- ❖ M&A transactions can involve complex financing, particularly if its a sizeable deal being run by a PE Firm
- ❖ VC houses also use preference share structures to protect their downside

---

# Valuation in M&A Transactions

---

- ❖ Consideration can include
  - ❖ Cash
  - ❖ Shares
  - ❖ Preference or Convertible stock
  - ❖ Debt - in more than one tranche, including Mezzanine, Junior and Senior
- ❖ These structures need to be modelled and their impact assessed on the valuation and the outcome of the deal - Accretion/Dilution

---

# Valuation in M&A Transactions

---

- ❖ Putting that aside, the fundamentals of the analysis are very similar
- ❖ You have to keep your eye on the basics

---

# Valuation in M&A Transactions

---

- ❖ Management
- ❖ Strategy
- ❖ Life Cycle Stage
- ❖ Historic Financial  
Performance and Balance  
Sheet structures

---

# Valuation in M&A Transactions

---

- ❖ At the heart of every deal we are still looking at the value of cash flow which is connected to the risk associated with that cash flow
- ❖ Rate of Return
- ❖ Growth
- ❖ Cost of Capital

---

# Valuation in M&A Transactions

---

- ❖ Focus on whether the target has a low return on investment AND there is room / scope for increasing that return through the deal, particularly synergies to make the target more efficient and profitable, grow faster and / or reduce its cost of capital.

---

# Valuation in M&A Transactions

---

- ❖ Lets take a look at Synergies
  - ❖ Benefits of the deal =
  - ❖ Value of Synergies -
  - ❖ Value of Premium

---

# Valuation in M&A Transactions

---

- ❖ Synergies might include:
  - ❖ Overhead cost reduction
  - ❖ Capacity saving or improved utilisation
  - ❖ Growth through investment (capex)
  - ❖ New sales from improved strategy, customer mix or new customer base
- ❖ Cannot apply the same discount rate to all synergies - some may have greater risk

---

# Valuation in M&A Transactions

---

- ❖ The assumptions underlying the results
- ❖ Accretion or Dilution must be challenged
- ❖ Management changes
- ❖ Forex rates of exchange
- ❖ Strategic adjustments and changes

---

# Valuation in M&A Transactions

---

- ❖ Valuation multiples are commonly used in M&A
- ❖ Comparable Companies and Precedent Transactions make this straightforward
- ❖ As we have seen, the selection of the Peer group is critical to the outcome
- ❖ Adjustments for outliers can further distort results
- ❖ EV / EBITDA most common
- ❖ Investment Bankers in Public Transactions use PE ratios

---

# Valuation in M&A Transactions

---

- ❖ Prepare to remain critical of multiples
  - ❖ EV / EBITDA multiple depends on
    - ❖ Changing ROIC
    - ❖ Asset Life and Asset Replacement (Depreciation and Capex)
    - ❖ Tax Rate
    - ❖ Changing Growth rates
    - ❖ Working Capital investment
    - ❖ Weighted Average Cost of Capital

---

# Valuation in M&A Transactions

---

- ❖ Your EV / EBITDA check list should include the peer group and the target having similar
  - ❖ Trends in ROIC
  - ❖ Growth rates and consistency with ROIC
  - ❖ Asset lives
  - ❖ Working Capital investment relative to EBITDA
  - ❖ Tax Rates
  - ❖ Cost of Capital
  - ❖ Capital Structures

---

# Valuation in M&A Transactions

---

- ❖ You should also keep a close eye on the Entry EV / EBITDA and the Exit EV / EBITDA to ensure that there is no arbitrage between the two

---

# Valuation in M&A Transactions

---

- ❖ A DCF valuation nearly always is part of the M&A modelling
- ❖ Bewary of using this for negotiation
- ❖ You will end up focusing and arguing about assumptions rather than the actual deal consideration
- ❖ The potential wide valuation range will only make this argument more complicated not more straightforward

---

# Valuation in M&A Transactions

---

- ❖ Taxation can become very complex in M&A deals and modelling
- ❖ Purchase accounting might be used for book purposes but for tax purposes the transaction may be treated as a tax free exchange
- ❖ This means that tax depreciation will be different from book depreciation and deferred taxes will arise.

---

# Valuation in M&A Transactions

---

- ❖ Another popular technique, particularly used by PE / VC houses is to make adjustments to the cost of capital (upwards) to reflect the value of smaller private companies or overseas companies (downwards)
- ❖ They are less liquid, higher risk and have financial statements prepared to lower standards are typical reasons for this.

---

# Valuation in M&A Transactions

---

- ❖ A final word should go to the Work Capital Adjustment argument which always takes place between a buyer and a seller
- ❖ The Seller wants to take all the spare cash out of the business prior to the sale
- ❖ The Buyer will always argue that there is no “spare” working capital and a capital injection is required.
- ❖ This has nothing to do with valuation and everything to do with cash and deal value for both sides.
- ❖ You have been warned.

---

# Valuation in M&A Transactions

---

- ❖ The purpose of this lecture has been to open your eyes to an additional level complexity when it comes to valuation in M&A transactions
- ❖ You need to be constantly questioning assumptions and avoid over simplifying conclusions without a clear understanding of why the answer make sense.
